

AIR HEATING ELEMENTS: Domestic applications

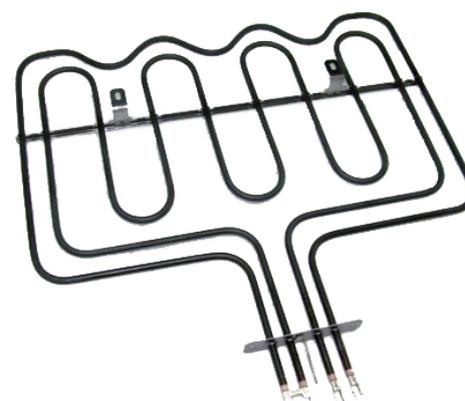

Description

For air heating and radiation heating Backer tubular element are the most popular alternative. Backer manages a large number of production techniques, giving a choice within a wide range of element types. An optimal heat solution of an application is decided by user environment and operating temperature. Backer for example can supply element with an operating temperature of as much as 900°C.

BACKER produces air heating elements with many different constructive solutions, depending on the final application and the specific need of every single customer. We can produce air heating elements from single spare parts, to fully bespoke air heating systems.

Oven heating elements

Available features

Tube material:	AISI 304 - AISI 316L - Inc.800 - Inc.825
Tube diameter (mm):	6.4 - 8 - 10 - 12 - 16 - 21
Assamby:	Flange, screw plug, nipple, faston.

Main applications

- Oven
- Grills
- Toasters
- Wax irons
- Sauna
